

CLAIM OR CLAIMS

1. A flagpole assembly comprising:
 - a) a staff having a longitudinal axis, the staff having an end mountable on a vertical wall;
 - b) a connector mounted to the staff having an end for rotation about the longitudinal axis, the connector being fixed longitudinally relative to the staff, and being releasably attachable to a flag connector such that a flag held to the staff by the connectors is free to swing 360° around the longitudinal axis of the staff; and
 - c) an electric light unit mounted on the staff such that it would project light on the flag.
2. The flag pole of Claim 1 comprising an electrical cord attached to the staff.
3. The flag pole of Claim 2 further comprising a tube forming the staff, the tube having an opening in the lower end such that the electrical cord extends through the opening and terminates at the light.
4. The flag pole of Claim 1, wherein the connector comprises one or more roller bearings to allow movement of the flag around the flag pole.
5. A flagpole assembly comprising
 - d) a staff having a longitudinal axis, the staff having an end mountable to a wall;
 - e) a pair of connectors mounted to the staff for rotation about the longitudinal axis, the connectors being fixed a spaced longitudinal distance apart, each connector having a portion that is releasably attachable to a flag connector such that a flag held to the staff by the connectors is free to swing 360° around the longitudinal axis of the staff; and
 - f) an electric light unit mounted on the staff such that it would project light on the flag.

6. A flag pole assembly kit for adapting a flag pole staff comprising
 - g) a circumferentially rotatable sleeve for attachment to the flag pole staff;
 - h) one or more longitudinally fixable clamps to hold the sleeve on the flag staff;and
 - i) a flag clip mounted on the sleeve.
7. The flag pole assembly of Claim 6 further comprising an electric light unit for mounting on the flag pole staff such that it would project light on the flag.
8. The flag pole assembly kit of Claim 7, further comprising a tube forming the staff, the tube having an opening in the lower end such that the electrical cord extends through the opening and terminates at the light.
9. The flag pole kit of Claim 6, further comprising roller bearings.
10. The flag pole kit of Claim 6, further comprising a wall mountable bracket for supporting the flag staff at an angle with respect to a vertical wall.
